Bacteria And Viruses That Cause the Most Illnesses

Salmonella

Campylobacter

Norovirus

For more information, visit fightbac.org

Less Common but Often Deadly Bacteria: *Listeria*

Listeria

The CDC estimates that Listeriosis causes about:

- **1,600 illnesses**
- **260 deaths**
in the U.S. annually

At Risk Groups for Listeriosis

9 out of 10 people who experience Listeriosis are in one of these at risk populations:

Pregnant Women (10x)

**Hispanic Pregnant
Women (24x)**

**Elderly age 65+
(4x)**

**Immune-
Compromised**

Keep Your Home Fridge Temp at 40 °F Or Below

One of the most effective ways to reduce the risk of foodborne illness. Germs that can cause illness grow rapidly in the “danger zone” between 40 °F - 140 °F.

GO 40
or BELOW

°F

The number of Listeriosis cases in the U.S. can be reduced by more than 70% if you go 40 °F or below*

Use a Refrigerator Thermometer

In order to ensure you're going 40 or below, invest in a refrigerator thermometer! Follow these two steps to ensure proper installation to help keep your foods safe:

1. Follow manufacturer instructions for ideal thermometer placement.

2. Make sure the thermometer reads 40 °F or below!

Smart Refrigeration Tip 1: Store and Thaw Food Safely

Do this at home to reduce the risk of foodborne illness!

Separate
leftovers into
small, shallow
containers

Refrigerate or
freeze perishables
within 2 hours
(1 hour if 90+ °F)

Consume or freeze
leftovers within 3-4
days
Toss after 4 days

Thaw and marinate
foods in the fridge,
not at room
temperature

For more information, visit fightbac.org

Smart Refrigeration Tip 2: Keep Your Refrigerator Clean

Frequent cleaning and sanitizing of your refrigerator surfaces can help to minimize bacterial cross-contamination.

- Wipe spills immediately.
- Regularly clean inside with hot water and liquid soap and dry with paper towels to minimize cross-contamination.
