Presentation Overview

Causes of Common Foodborne Illnesses at Home

Protect Your Food.
Protect Your Family.

For more information, visit fightbac.org
Nearly 48 Million People Affected

That’s 1 in 6 people each year in the United States who experience food poisoning.

For more information, visit fightbac.org
Bacteria And Viruses That Cause the Most Illnesses

- Salmonella
- Norovirus
- Campylobacter

For more information, visit fightbac.org
Less Common but Often Deadly Bacteria: *Listeria*

The CDC estimates that Listeriosis causes about:
- 1,600 illnesses
- 260 deaths in the U.S. annually

Source: CDC

For more information, visit fightbac.org
At Risk Groups for Listeriosis

9 out 10 people who experience Listeriosis are in one of these at risk populations:

- Pregnant Women (10x)
- Hispanic Pregnant Women (24x)
- Elderly age 65+ (4x)
- Immune-Compromised

Use a Refrigerator Thermometer

In order to ensure you’re going 40 or below, invest in a refrigerator thermometer! Follow these two steps to ensure proper installation to help keep your foods safe:

1. **Follow manufacturer instructions** for ideal thermometer placement.

2. Make sure the **thermometer reads 40 °F or below**!

For more information, visit fightbac.org
Smart Refrigeration Tip 1: Store and Thaw Food Safely

Separate leftovers into small, shallow containers

Refrigerate or freeze perishables within 2 hours (1 hour if 90+ °F)

Consume or freeze leftovers within 3-4 days Toss after 4 days

Thaw and marinate foods in the fridge, not at room temperature

Do this at home to reduce the risk of foodborne illness!

For more information, visit fightbac.org
Smart Refrigeration Tip 2: Keep Your Refrigerator Clean

Frequent cleaning and sanitizing of your refrigerator surfaces can help to minimize bacterial cross-contamination.

- Wipe spills immediately.
- Regularly clean inside with hot water and liquid soap and dry with paper towels to minimize cross-contamination.
